Internship, Frontend Developer

Feb-2025 – May-2025

Ongoing Project: Book My Services

- Overview – Developing a service-booking web application that allows users to schedule local services like electricians, plumbers, and more. The platform focuses on a clean UI and smooth booking experience.
- Key Features – Service browsing and selection, Booking with preferred date and time, Category-based service filtering, Responsive and mobile-friendly design, Interactive UI using Tailwind CSS
- Tech Stack – MERN (MongoDB, Express.js, React, Node.js). project currently in progress

Projects

Tamil Letters—type(web app)

github.com/tamil-letters1/repo [↗](#)

- Developed a responsive React application using modern JavaScript features, designed as a learning project for an American student
- Tools Used: HTML, CSS, JS

Book-App(web app)

[github.com/Book-App/repo\(frontend\)](https://github.com/Book-App/repo(frontend)) [↗](#)

- Users can upload their own stories, read stories shared by others, and leave reviews.
- Tools Used: MERN, Tailwind CSS

[github.com/Book-App/repo\(backend\)](https://github.com/Book-App/repo(backend)) [↗](#)

GD-Events(web app)

- GD-Events allows users to book venues for functions and select vendors based on their needs. It includes a balance check feature that automatically updates the total cost as users select vendors, helping them track their expenses in real time.
- Tools Used: MERN, Bootstrap5

[github.com/gdevents/repo\(frontend\)](https://github.com/gdevents/repo(frontend)) [↗](#)

[github.com/gdevents/repo\(backend\)](https://github.com/gdevents/repo(backend)) [↗](#)

Nainaa-Cabs

github.com/nainaa-cabs/repo [↗](#)

- Users can book cabs and confirm their bookings. After confirmation, a notification is sent to the admin. Once the admin approves, the user receives a ticket via email. Users can also leave reviews. The admin dashboard features charts dis-

playing weekly, monthly, and yearly revenue and bookings.

- Tools Used: React,TailwindCss

Technologies

Languages: C, C++ , Python. HTML, CSS, Javascript, Bootstrap5, Nodejs, Expressjs, MongoDB TailwindCSS, Flowbite-react

Deployment: Netlify, Render

Tools: Firebase, Git, Github.
